

How to install & configure Cisco AnyConnect on iPhone

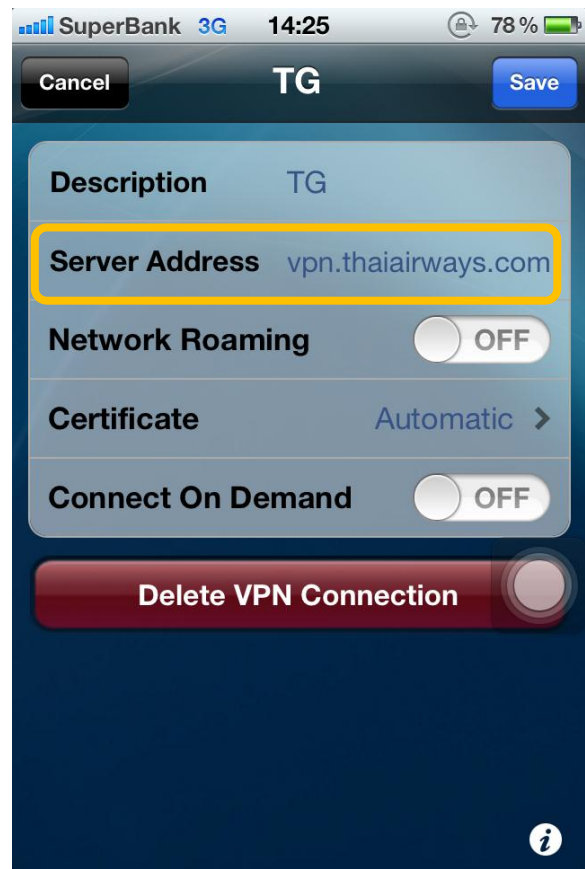

Step 1 Install app Cisco AnyConnect in AppStore

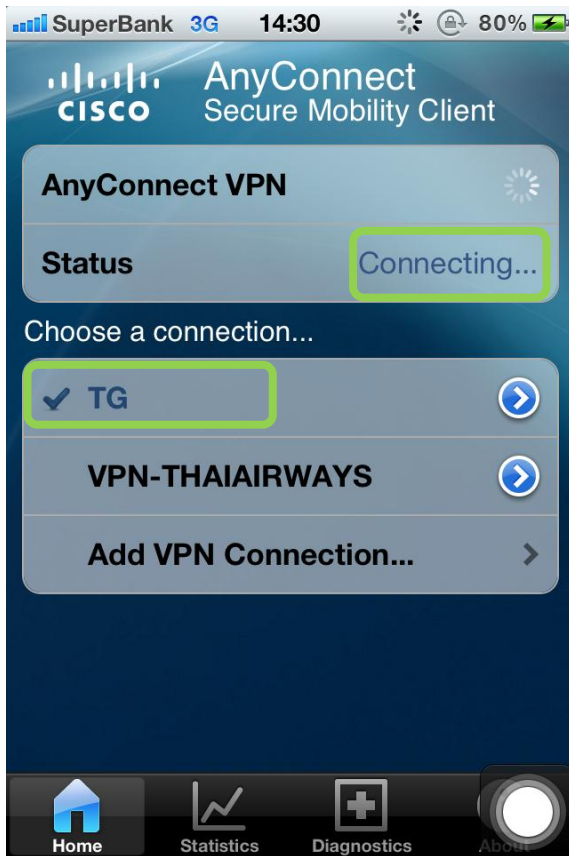

After finish installation, there will be AnyConnect app icon on screen.

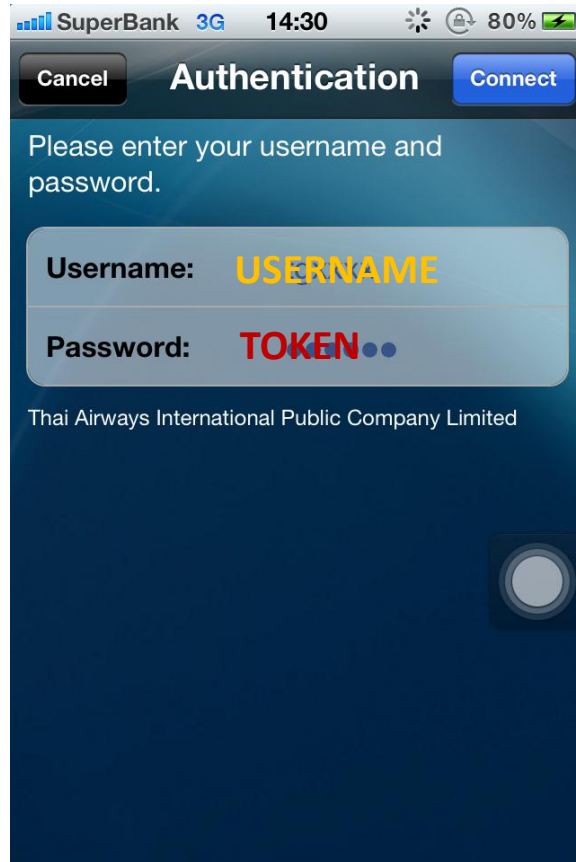

Step 2 Open app AnyConnect to create new profile for VPN. To create profile touch on “Add VPN Connection...” and input Description and Server Address as “vpn.thaiairways.com”

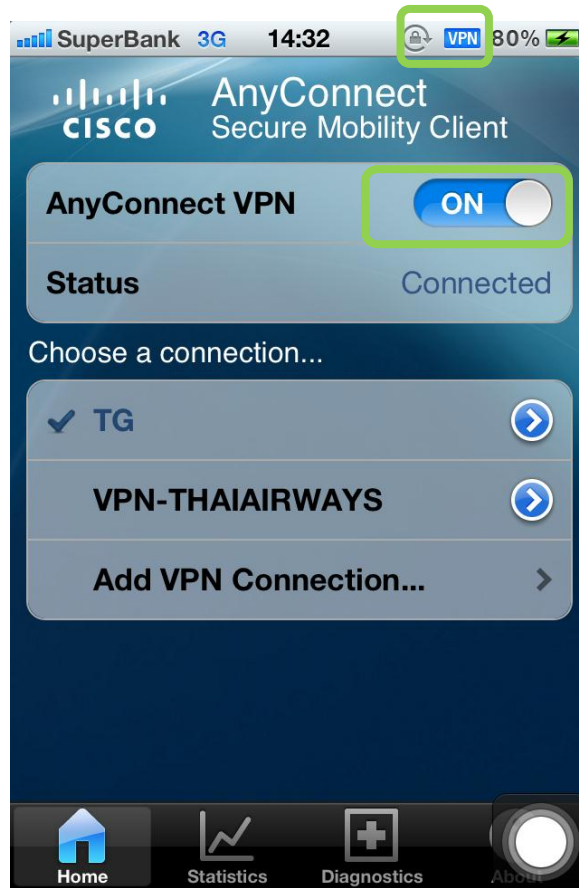

Step 3 Choose VPN Connection to connect (there will be ✓ icon on selected VPN Profile). Then switch AnyConnect VPN to “ON”. AnyConnect will start VPN connection.

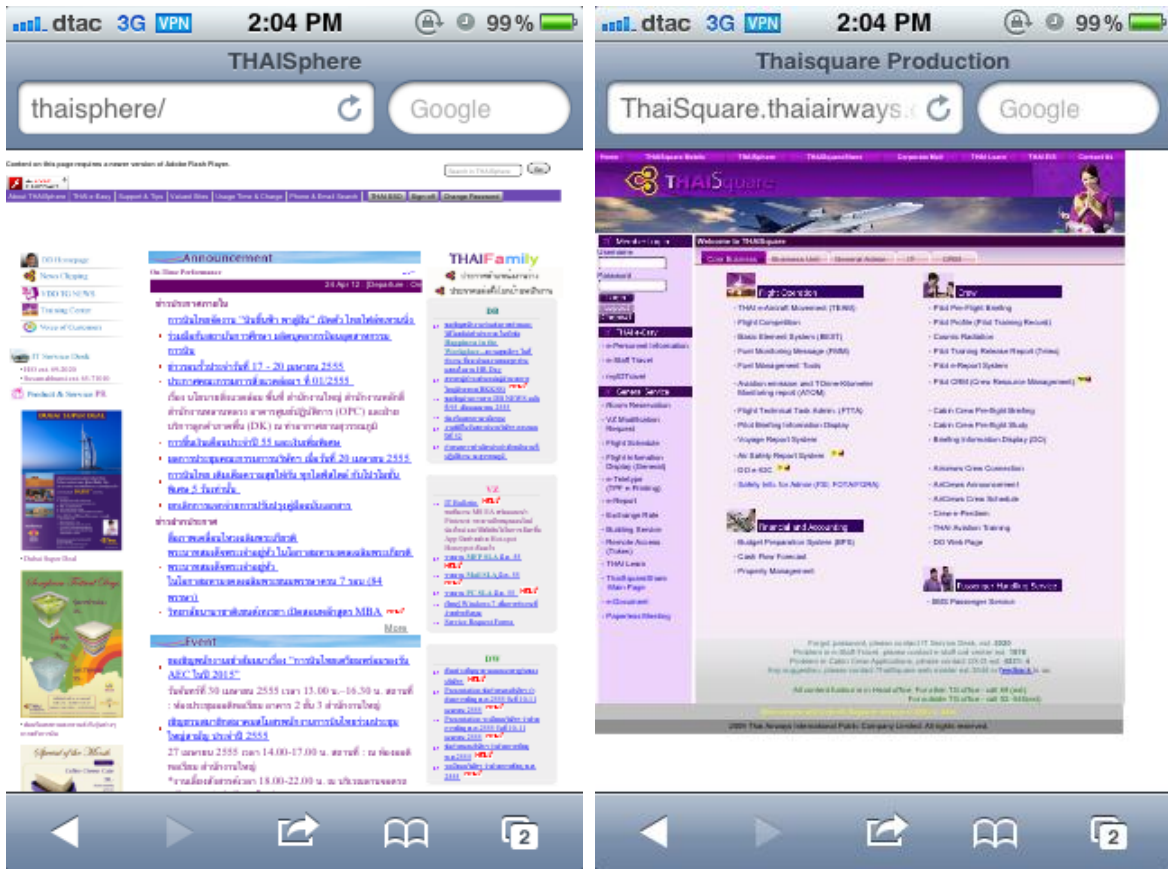

Step 4 AnyConnect will ask for Username and Password on pop-up window. After finish input, touch "Connect"

Status will show as "Connected", if connection is successful.

User can now use service on internal network by using apps.

Step 5 Switch to "OFF" when finished working
